

RENT

Login, payments and notifications are not your product. Rent all three.

NO ONE PICKS YOUR APP FOR THE LOGIN.

AUTH Resets, lockouts, sessions, two-factor

PAY Refunds, disputes, tax, card rules

PUSH Two platforms, tokens that die quietly

OWN THE MIDDLE. RENT THE EDGES.

Build versus buy is not a taste question. Three tests settle it before the argument starts.

01

RENT ANYTHING REGULATED

Card rules, tax and identity change without asking you. A vendor tracks those changes for a living. You would be doing it on evenings.

02

OWN WHAT YOU WOULD DEFEND

If a competitor copied it tomorrow and you would be furious, build it. If you would shrug, rent it.

03

PRICE THE EXIT FIRST

Before you sign, ask what leaving costs. Can you export your users and their history? If the answer is vague, that is the real price.

FOREVER

Integration finishes. Maintenance does not.
Rented plumbing is the only part of your app
someone else keeps fixing after launch.

BUILD OR BUY?

Save this and run the three tests before you sign anything.
