

REBUILT

Most startup MVPs get thrown away inside a year.
Three decisions cause it.

MVPS RARELY FAIL. THEY GET REPLACED.

01 Every feature takes longer than the last

02 New devs need weeks to be useful

03 One change quietly breaks three others

THREE DECISIONS, ALL MADE IN WEEK ONE.

None of them are about code quality. They are about what you quietly allowed to become permanent.

01

NAME THE THROWAWAY

Decide which parts are scaffolding before you build them — and write it down where the next developer will find it.

02

KEEP THE DATA HONEST

Schemas outlive code. Every shortcut here is the one you cannot quietly undo later.

03

RENT THE EDGES, OWN THE MIDDLE

Auth, payments and push can be rented from someone else. Your core logic cannot.

WEEK 1

When all three decisions get made — long before anyone in the room realises they were decisions at all.

SCOPING AN MVP?

Save this before you write the first line of it.
